## **ABSTRACT**

The present invention relates to a method for painting non-polar, in particular polyolefin plastic substrates, comprising the steps:

- 5 1. applying a pigmented paint layer consisting of a colourand/or effect-imparting coating composition directly to the plastic substrate and
- curing the pigmented paint layer thus obtained,
  wherein the applied colour- and/or effect-imparting coating
  composition comprises
  - A) 30 to 90% by weight of a conventional colour- and/or effectimparting coating composition constitution, containing
    - Aa) at least one binder,
    - Ab) at least one colour and/or effect pigment,
    - Ac) at least one organic solvent and/or water and
    - Ad) optionally, conventional paint additives and
  - B) 10 to 70% by weight of an adhesion-promoting constitution, containing
    - Ba) at least one ethylene vinyl acetate copolymer,
- 20 Bb) at least one chlorinated rubber.
  - Bc) at least one chlorinated polyolefin and
  - Bd) optionally, organic solvents and/or water and conventional paint additives,

wherein the sum of the portions of components A) and B) makes up 25 100% by weight.
